

User Stories

US-LM-001 - Authenticate with valid credentials

As an authorized user, I want to sign in with valid credentials so that I can securely access the Keepme platform.

Acceptance Criteria

- Given the login page is displayed, when valid credentials are submitted, then the system authenticates the user.
- The system creates a secure authenticated session.
- The user is redirected to the default authorized landing page or Metrics page.

US-LM-002 - Reject invalid login attempts

As a user, I want clear feedback when my credentials are invalid so that I can correct the login information without gaining unauthorized access.

Acceptance Criteria

- When invalid credentials are submitted, access is denied.
- A clear, non-sensitive error message is displayed.
- No authenticated session is created and protected pages remain inaccessible.

US-LM-003 - Access the Metrics dashboard

As an authenticated user, I want to open the Metrics dashboard so that I can review business performance.

Acceptance Criteria

- The Metrics menu is visible only when the user is authorized.
- When Metrics is selected, the dashboard loads without application errors.
- Metric cards and available filters are displayed.

US-LM-004 - Filter metrics by time period

As an authenticated user, I want to filter metrics by year, month, or all time so that I can analyze performance for the required period.

Acceptance Criteria

- The user can select a valid year, month, or All Time option.
- Metrics refresh using the selected period.
- Future periods with no data show an appropriate zero/no-data state.

US-LM-005 - Filter metrics by customer

As a multi-customer user, I want to select one customer or all customers so that I can view customer-specific or aggregated metrics.

Acceptance Criteria

- Selecting a customer refreshes the metrics for that customer.
- Selecting All Customers displays aggregated values within the user's permissions.
- Searching for a non-existent customer displays "No Results Found" or an equivalent empty state.

US-LM-006 - View accurate metric cards

As a business user, I want accurate metric values so that I can rely on the dashboard for decision-making.

Acceptance Criteria

- All-customer values are correctly aggregated.
- Individual-customer values match the selected customer and date range.
- No-data selections display zero values rather than stale values.

US-LM-007 - View conversion metrics

As a business user, I want conversion percentages calculated and formatted correctly so that I can understand lead-to-tour performance.

Acceptance Criteria

- Conversion uses the approved business formula.
- A value such as 6 tours from 70 leads is displayed as 8.6%.
- When the denominator is zero, the conversion is displayed as 0% and no calculation error appears.

US-LM-008 - View out-of-hours metrics

As a business user, I want leads and tours classified accurately as out of hours so that I can evaluate activity outside configured business hours.

Acceptance Criteria

- Classification uses the selected customer's business-hours configuration.
- Out-of-hours values are shown in the relevant metric cards.
- Zero out-of-hours leads and tours produce a 0% conversion value.

US-LM-009 - Maintain data consistency and formatting

As a user, I want metrics to remain consistent across filters and properly formatted so that the dashboard is trustworthy and readable.

Acceptance Criteria

- UI values match the corresponding backend or insights values for the same range.
- Changing filters does not mix data from different selections.
- Numbers, percentages, and zero values use consistent formatting.

US-LM-010 - Request a large-range report by email

As an authenticated user, I want to request an emailed report for a large date range so that I can receive results that are not displayed immediately.

Acceptance Criteria

- A large range, such as more than one month, opens a confirmation dialog with a consent/information message.
- Confirming queues the report and shows a success acknowledgement.
- Cancelling closes the flow and does not generate a report.
- A normal range displays directly without the large-range dialog.
- A successfully generated report is delivered to the user's registered email address.
